

## LSA CHAIN BAR OIL

**LSA CHAIN BAR OIL** is a specially formulated tacky lubricant designed to provide maximum protection to all petrol and electric chainsaw chains, bars and sprockets.

An advanced combination of selected base oil, anti-wear, extreme pressure (EP) and cling additives lubricate working parts and surfaces to provide a barrier against wear, rust, corrosion and moisture, which allows for maximum service life.

It is particularly suitable for units operating with diaphragm pumps.

The tacky nature of this product prevents it from being flung off chains, whilst producing a plating effect that lubricates and assists to maintain chain sharpness. It also assists to flush away wood chips, sap and dust from working surfaces.

### APPLICATION

- Miscible with all mineral oil and synthetic based oils. No flushing is therefore required.

### TYPICAL CHARACTERISTICS

Properties	Unit	Value
Specific Gravity @ 15 °C		0.89
Viscosity @ 40°C	cSt	150
Viscosity @ 100°C	cSt	14.7
Viscosity Index		96
Flash Point	°C	>210
Pour Point	°C	-9
